October 12, 2010

Robert Dudley
CEO, BP
1101 New York Avenue Northwest, Suite 700
Washington, DC 20005

Dear Mr. Dudley:

We are writing to express our continuing interest in, and concerns about, the $500 million BP has pledged to spend on independent scientific research on the impacts of the Gulf disaster, separate from any work related to the Natural Resource Damage Assessment (NRDA). As you know, we were pleased when BP announced this funding in the spring, although we raised questions about the extent the research would be truly independent.

We appreciated the information BP officials provided to us in late June about the plans that had then been put on hold pending conversations with the Gulf governors.

We look forward to our upcoming briefing on BP’s current plans for disbursing the remaining funds, but we are disturbed by press reports indicating that politics may unduly constrain the distribution of the money. The impacts of the disaster raise a host of scientific questions, many of them unprecedented—such as the effects of the deepwater use of dispersants—and they need to be addressed by the best scientific minds available. While many such scientists may reside at institutions in the Gulf, no region has a monopoly on scientific expertise. The Gulf will benefit most from getting the best scientific guidance. Economic recovery needs to be part of the plan to restore the Gulf—and BP must contribute to such efforts—but not through biasing the dissemination of funds for scientific research.

We hope BP will set up a fair, open and unbiased system for distributing research funding that will be based on ensuring that the Gulf will benefit by getting the most credible, thoughtful scientific results.

Again, we look forward to meeting with BP officials. It is urgent that research begin promptly and be conducted well.

Sincerely,

Peter Lehner
Executive Director
